"TTCare" is a simple and easy way to analyze your pet's health and to check it periodically.

All you do is download the software and take a picture of your dog or cat. In a few minutes the AI works to detect eye, skin, and joint medical issues and identify diseases.

The software will detect abnormalities with amazing 90% accuracy!

You can get veterinary advice online if you wish or get referrals to your favorite vet.

The first 3 scans are free. After that the price is $4.99 per month, less if you pay annually.

It's easy to do follow-up to check on progress or improvement.
