SUMMARY

"Rescuezilla" and "Clonezilla" are compatible with each other.

An "image" that you make with one can be used to "restore" with the other.

TOPICS

- Clonezilla Live's User Interface
- Rescuezilla's User Interface
- Clonezilla Live's Web site
- Rescuezilla's Web site
- Difference in System Requirements

"RESCUEZILLA" & "CLONZILLA"

- "Clonezilla Live" and "Rescuezilla" are two "Free and Open Source" distributions of "..Linux.." that you can use to create clones and backup images of the hard drives and SSDs in your existing "Windows 10", "Windows 11", and "macOS" computers.

"RESCUEZILLA" & "CLONZILLA" (continued)

- To use "Clonezilla Live" or "Rescuezilla", you have to place them on a bootable DVD or bootable USB thumb drive and then boot up your "Windows.." computer or "..Linux.." computer:

CLONZILLA LIVE'S USER INTERFACE

- "Clonezilla Live" has a traditional text-based user interface:

Clonezilla - Opensource Clone System (OCS)

Clonezilla is free (GPL) software, and comes with ABSOLUTELY NO WARRANTY

///Hint! From now on, if multiple choices are available, you have to press space key to mark your selection. An asterisk (*) will be shown when the selection is done///

Two modes are available, you can

- (1) clone/restore a disk or partition using an image
- (2) disk to disk or partition to partition clone/restore.

Besides, Clonezilla lite server and client modes are also available. You can use them for massive deployment

Select mode:

```
device-image  work with disks or partitions using images
device-device work directly from a disk or partition to a disk or partition
remote-source Enter source mode of remote device cloning
remote-dest   Enter destination mode of remote device cloning
lite-server   Enter_Clonezilla_live_lite_server
lite-client   Enter_Clonezilla_live_lite_client
```

<Ok>

<Cancel>

```
device-image work with disks or partitions using images
device-device work directly from a disk or partition to a disk or partition
remote-source Enter source mode of remote device cloning
remote-dest Enter destination mode of remote device cloning
lite-server Enter_Clonezilla_live_lite_server
lite-client Enter_Clonezilla_live_lite_client
```

<Ok>

<Cancel>

RESCUEZILLA'S USER INTERFACE

- "Rescuezilla" has a graphical user interface:

Welcome

Select an Option

Easily create a backup image of your computer, or completely restore from one. Click an option to begin:

(beta)

"CLONZILLA LIVE"

- Based on "Debian" Linux
- Web site is located at <https://clonezilla.org>

Minimum System Requirements for Clonezilla live:

- X86 or x86-64 processor
- 196 MB of system memory (RAM)
- Boot device, e.g. CD/DVD Drive, USB port, PXE, or hard drive

"RESCUEZILLA"

- Based on "Debian" Linux and "Ubuntu LTS" Linux
- Web site is located at <https://rescuezilla.com>

Rescuezilla is a free, open-source disk imaging solution that supports data backups, restores, and recovery actions. It's a continuation of the Redo Backup and Recovery project, which went quiet after 2012. Rescuezilla was forked from Redo Backup and Recovery (now called Redo Rescue) because it had been abandoned for 7 years. Rescuezilla has been rebuilt from the ground up to be fully compatible with Clonezilla, which is trusted by tens of millions of individuals and businesses for almost 20 years. This means Rescuezilla can restore backups created by Clonezilla, and backups created by Rescuezilla can be restored using Clonezilla. 

"RESCUEZILLA" (continued)

System Requirements

- PC (Intel/AMD compatible)
- 1GB RAM (2GB recommended)
- USB stick (faster the better, this stick will be completely erased to hold Rescuezilla itself)
- External USB hard drive (with enough free space to hold your backup images)

- per <https://rescuezilla.com/download>

SOME ADDITIONAL COMMENTS

- Some really old computers will only work with "CLONEZILLA LIVE" instead of "Rescuezilla"
- "Rescuezilla" is easier to use
- The developers for "CLONEZILLA LIVE" and "Rescuezilla" are separate groups of people that share their source code with each other.

SOME ADDITIONAL COMMENTS

(continued)

- Rescuezilla's developer is located in San Francisco, California:
<https://github.com/shasheene>
and
<https://www.linkedin.com/in/shasheen-ediriweera-22b560276>

SOME ADDITIONAL COMMENTS

(continued)

- "CLONEZILLA LIVE" 's developer is located in Taiwan:
