# SUMMARY

To expand the use of your existing end-user computer, you can add a USB-attached CD-R\*/DVD-R\*/Blue Ray-R\* or a USB-attached thumb drive to it, if you do not already have one. Using one of these peripherals, you can then boot up and back up or clone your data and photo files with the totally-free "Clonezilla Live".

- **【Best External CD/DVD Drive for Laptop Mac】** Considering that most of the latest laptop and desktop PCs are not equipped with an internal CD/DVD drive. This ROOFULL USB 3.0 external CD/DVD drive is a perfect solution for most computers to read and write CDs and DVDs. Just plug the data cable (on the back of the drive) into your computer's USB-A or USB-C port, and insert your CDs or DVDs, it will be recognized automatically, you can then use a media player, burning, or ripping software to read, write, or digitize your discs, no complex settings, plug and play!
