# SUMMARY

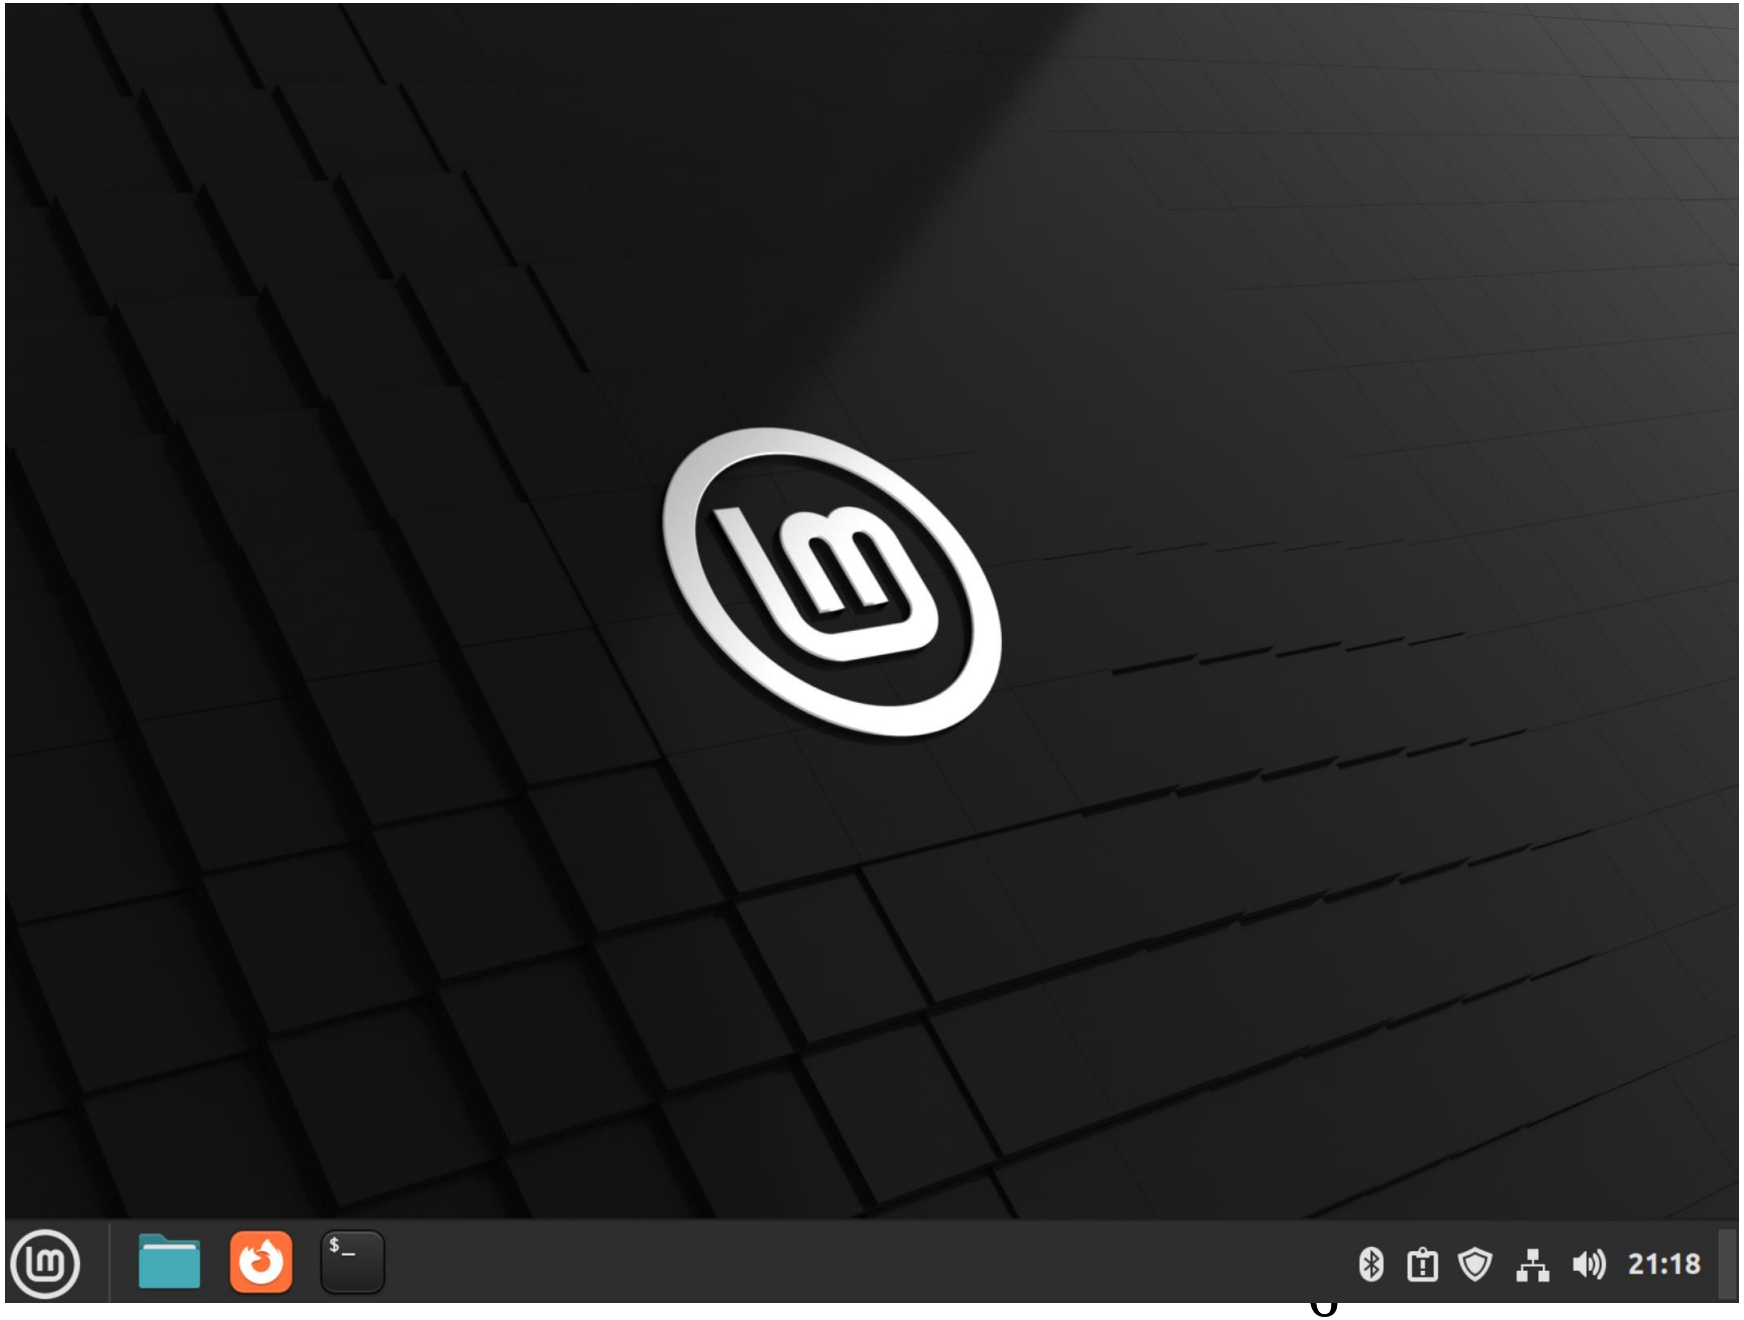
Here is how you can create either a "CLONEZILLA LIVE" CD or DVD
or a "CLONEZILLA LIVE" bootable USB flash drive.

# TOPICS

- Downloading the "Clonezilla Live" .ISO file
- Making a Bootable USB Thumb drive from the Clonezilla *.ISO file
- Or, using the "Clonezilla Live" ISO file to make a  bootable CD-R* disk or a bootable DVD-R* disc

# DOWNLOAD THE "CLONEZILLA LIVE" .ISO FILE

- From inside a Linux computer, start up any Web browser:



21:18

# DOWNLOAD THE "CLONEZILLA LIVE" .ISO FILE (continued)

Features:
Many File systems are supported: (1) ext2, ext3, ext4, reiserfs, reiser4, xfs, jfs, btrfs, f2fs and nilfs2 of GNU/Linux, (2) FAT12, FAT16, FAT32, exFAT and NTFS of MS Windows, (3) HFS+ and APFS of Mac OS, (4) UFS of FreeBSD, NetBSD, and OpenBSD, (5) minix of Minix, and (6) VMFS3 and VMFS5 of VMWare ESX. Therefore you can clone GNU/Linux, MS windows, Intel-based Mac OS, FreeBSD, NetBSD, OpenBSD, Minix, VMWare ESX and Chrome OS/ Chromium OS, no matter it's 32-bit (x86) or 64-bit (x86-64) OS. For these file systems, only used blocks in partition are saved and restored by Partclone. For unsupported file system, sector-to-sector copy is done by dd in Clonezilla.
LVM2 (LVM version 1 is not) under GNU/Linux is supported.

Download

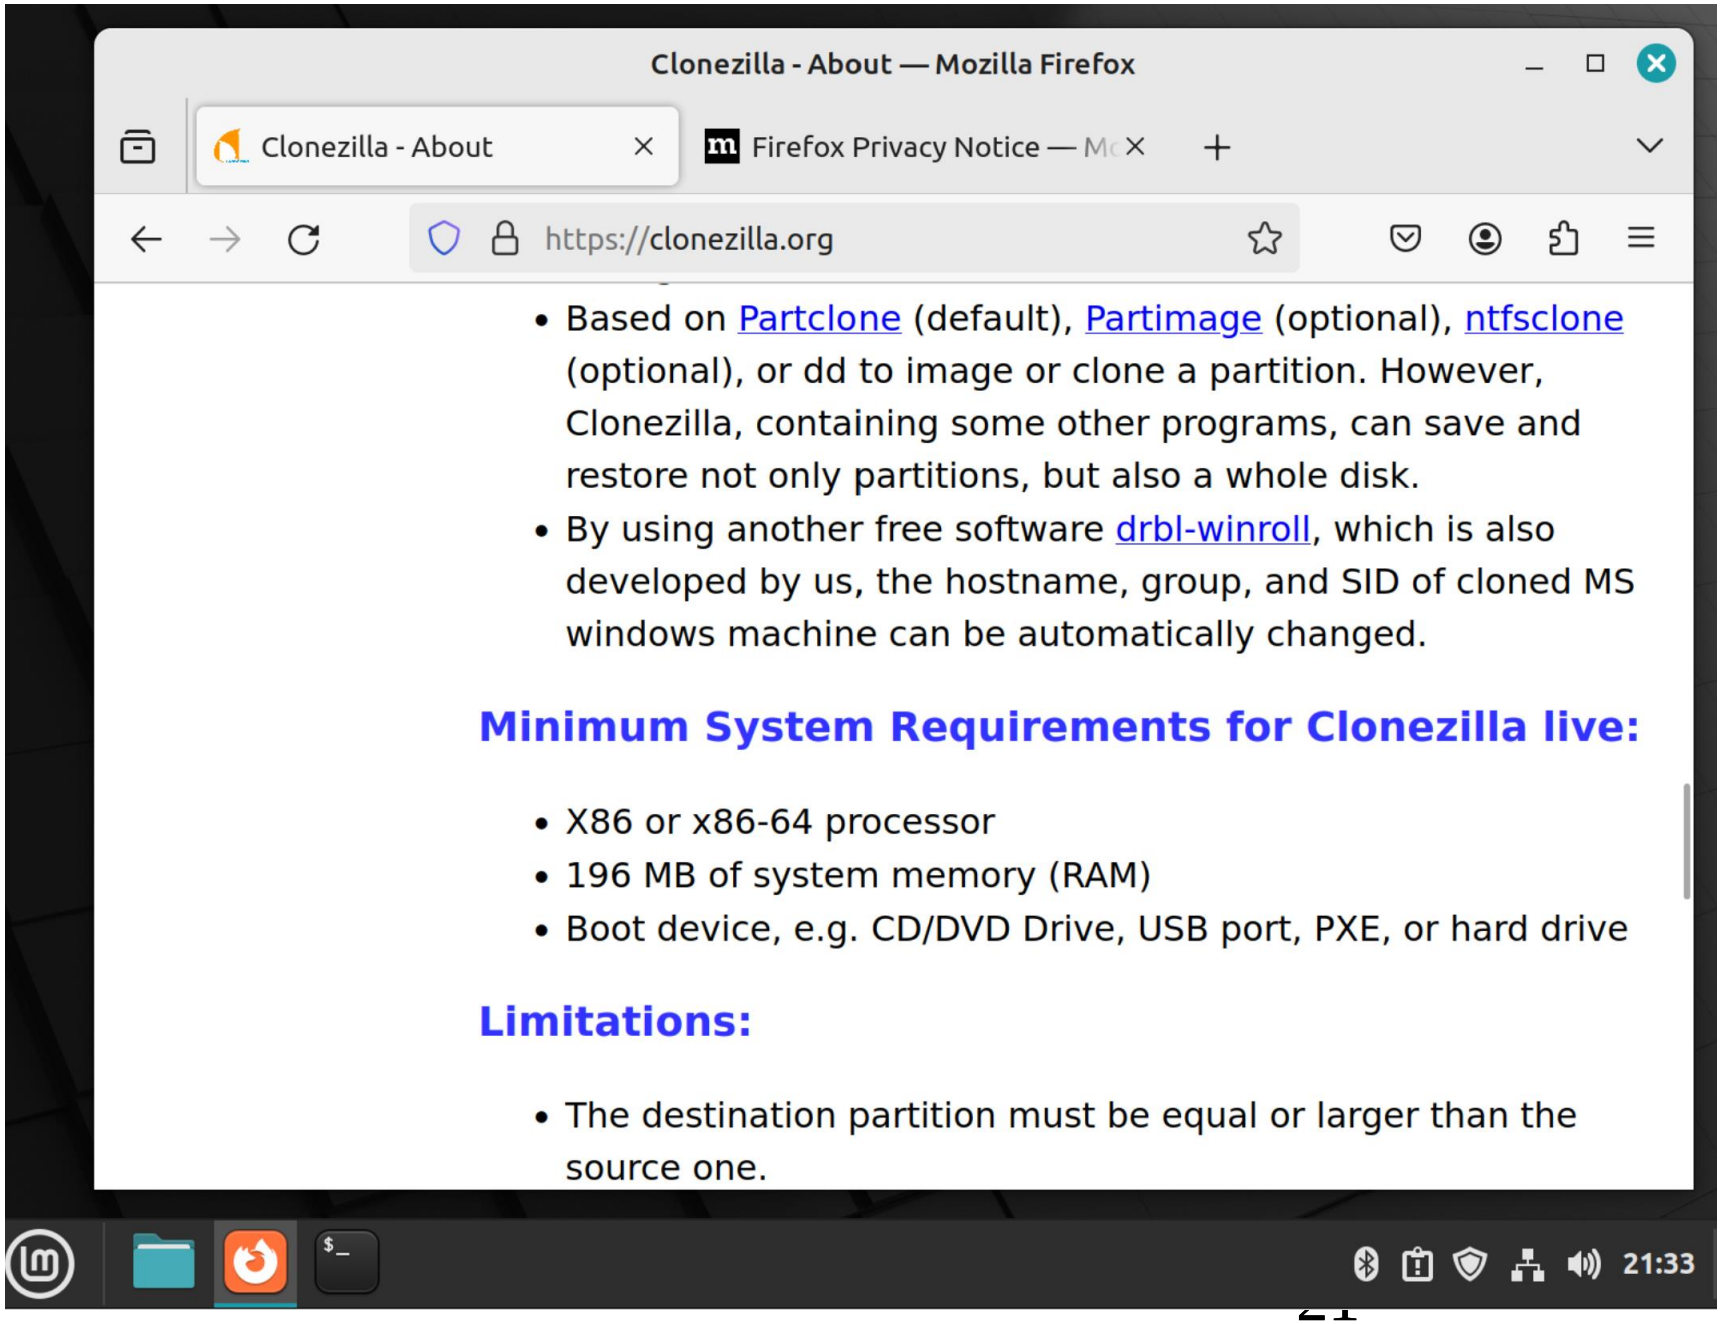
- Both MBR and GPT partition formats of hard drive are supported. Clonezilla live also can be booted on a BIOS or uEFI machine.
- Unattended mode is supported. Almost all steps can be done via commands and options. You can also use a lot of boot parameters to customize your own imaging and cloning.
- One image restoring to multiple local devices is supported.
- Image could be encrypted. This is done with ecryptfs, a POSIX-compliant enterprise cryptographic stacked filesystem.
- Multicast is supported in Clonezilla SE, which is suitable for massive clone. You can also remotely use it to save or restore a bunch of computers if PXE and Wake-on-LAN are supported in your clients.
- Bittorrent (BT) is supported in Clonezilla lite server, which is suitable for massive deployment. The job for BT mode is done by Ezio.

https://googleads.g.doubleclick.net/aclk?sa=l&ai=C...obChMIjpn93fDthAMVLvj9BR0f6ANBEAEYASAAEgL7svD_BwE

21:31



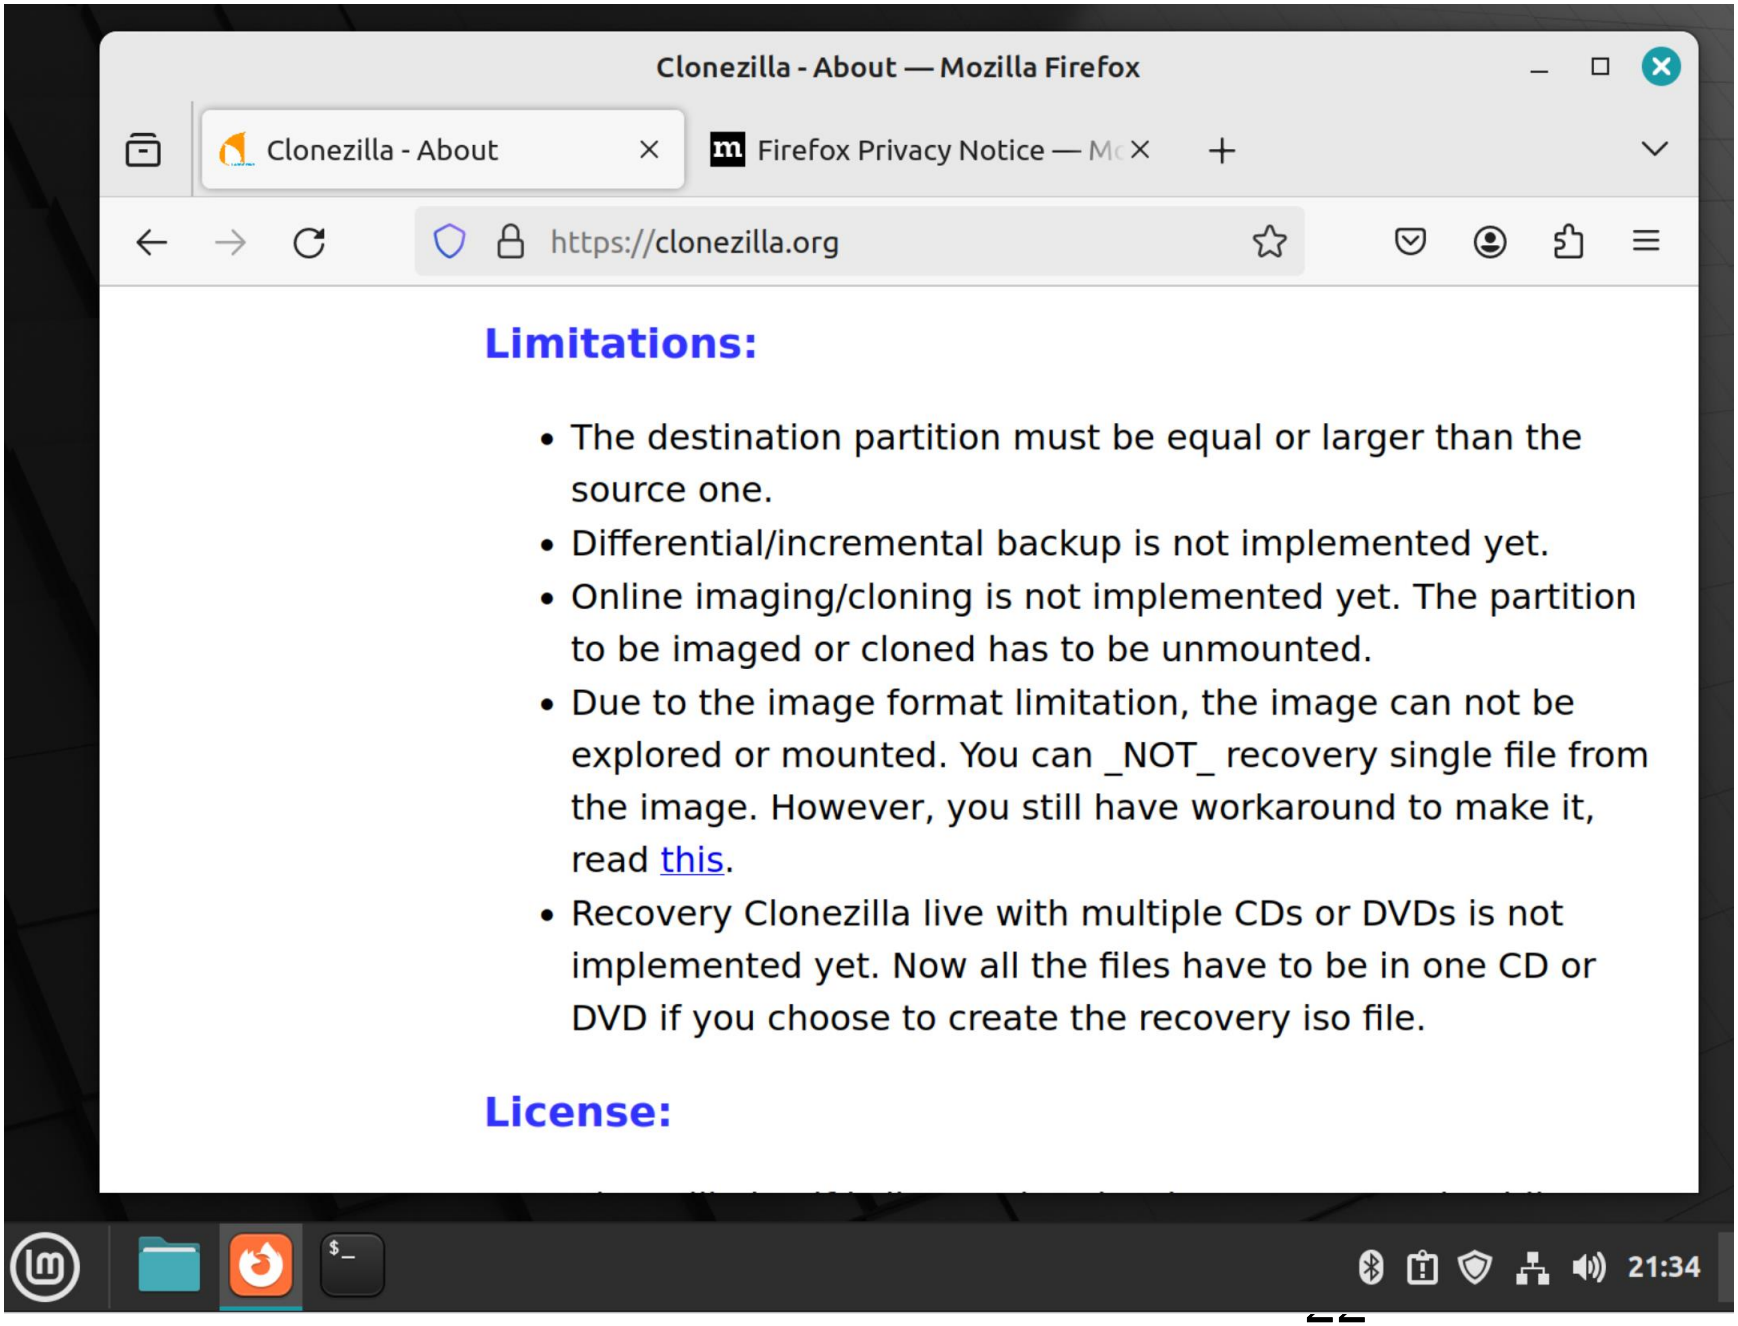
- Based on Partclone (default), Partimage (optional), ntfsclone (optional), or dd to image or clone a partition. However, Clonezilla, containing some other programs, can save and restore not only partitions, but also a whole disk.
- By using another free software drbl-winroll, which is also developed by us, the hostname, group, and SID of cloned MS windows machine can be automatically changed.

## Minimum System Requirements for Clonezilla live:

- X86 or x86-64 processor
- 196 MB of system memory (RAM)
- Boot device, e.g. CD/DVD Drive, USB port, PXE, or hard drive

## Limitations:

- The destination partition must be equal or larger than the source one.



Clonezilla - About — Mozilla Firefox
Clonezilla - About
Firefox Privacy Notice — Mc
https://clonezilla.org
Limitations:
The destination partition must be equal or larger than the source one.
Differential/incremental backup is not implemented yet.
Online imaging/cloning is not implemented yet. The partition to be imaged or cloned has to be unmounted.
Due to the image format limitation, the image can not be explored or mounted. You can _NOT_ recovery single file from the image. However, you still have workaround to make it, read this.
Recovery Clonezilla live with multiple CDs or DVDs is not implemented yet. Now all the files have to be in one CD or DVD if you choose to create the recovery iso file.

USB Image Writer
Make a bootable USB stick
ISO image:
clonezilla-live-3.1.2-9-amd64.iso
USB stick:
USB SanDisk 3.2Gen1 (/dev/sdb) - 494GB
Verify
Write

USB Image Writer
Make a bootable USB stick
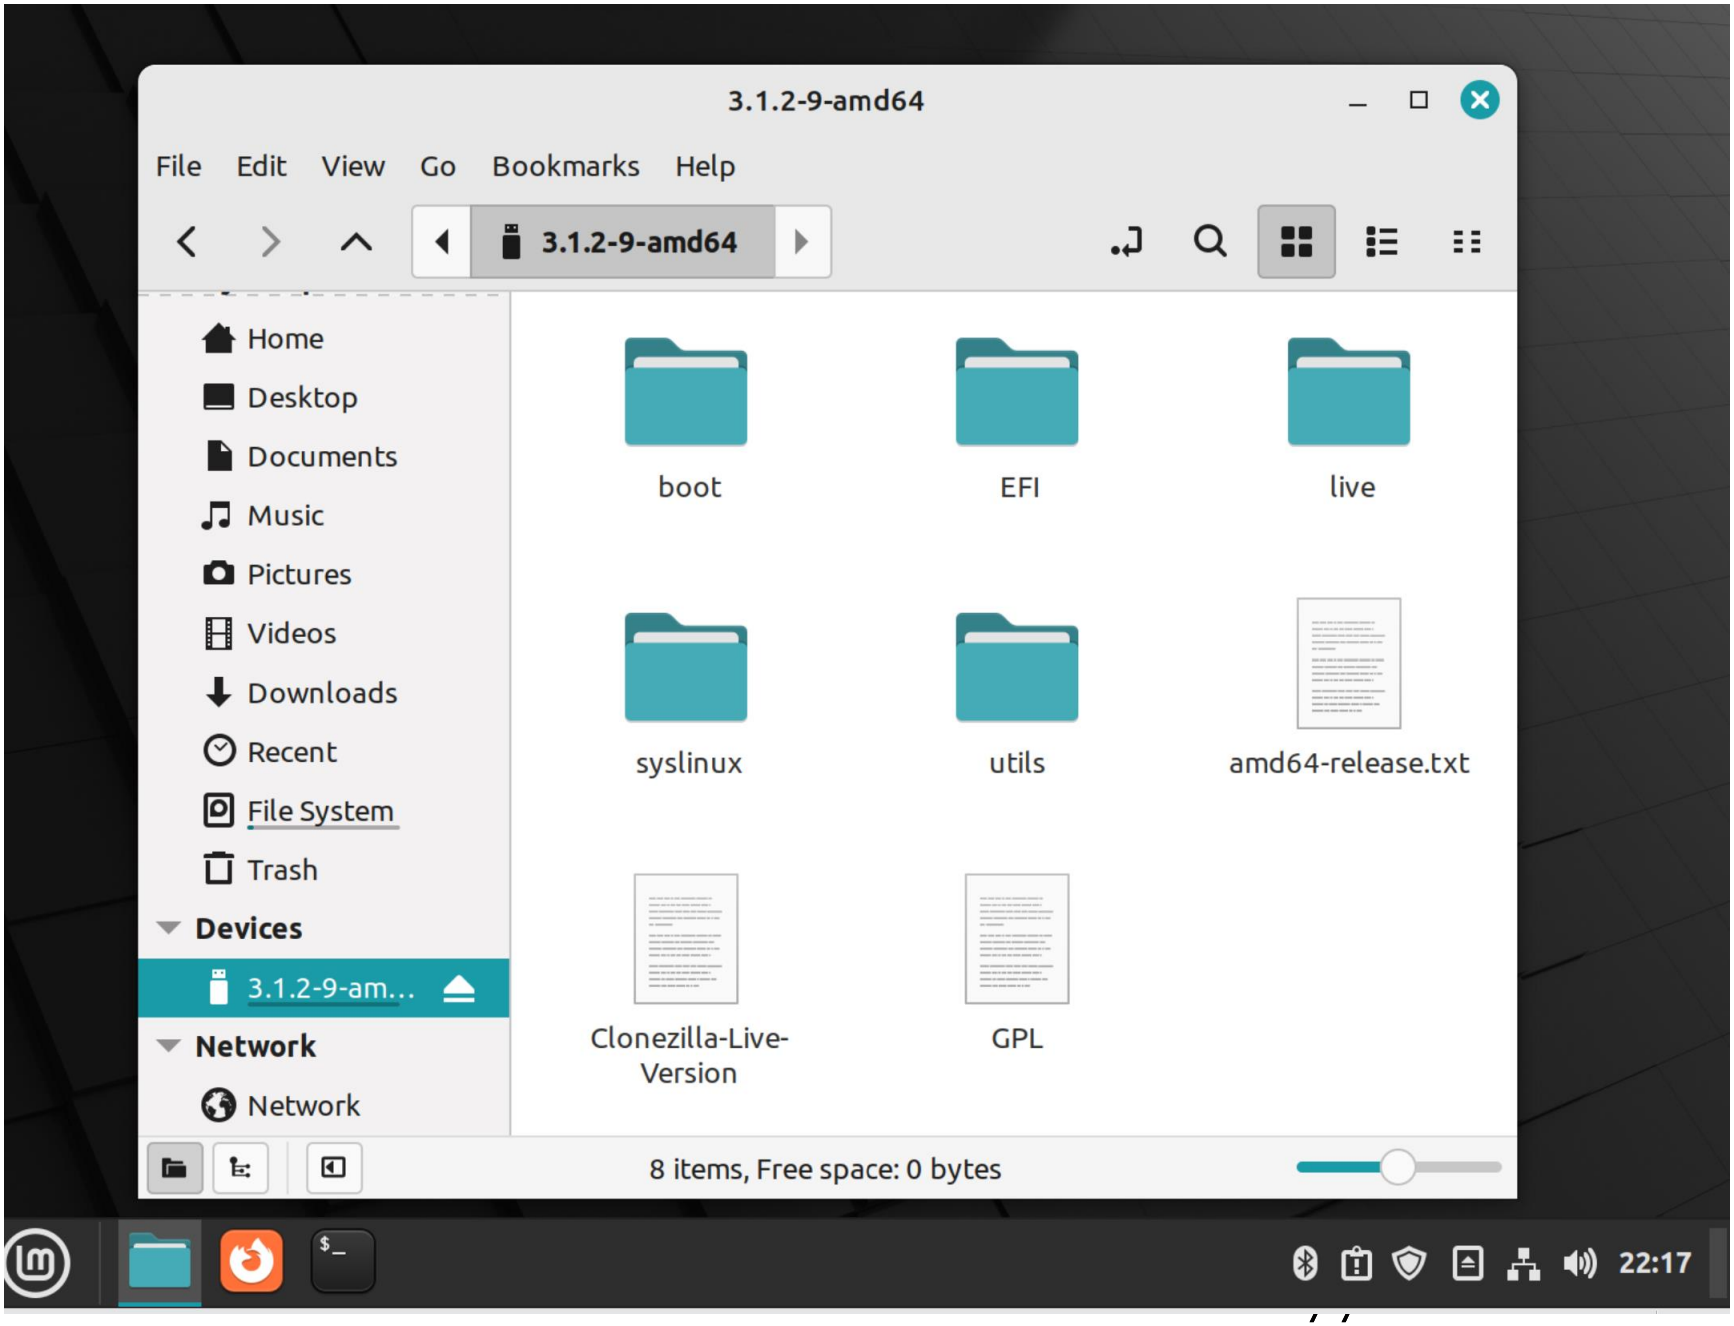
The image was successfully written.

# CREATE A BOOTABLE "CLONEZILLA LIVE" USB THUMB DRIVE (continued)

- If right-clicking on the "CLONEZILLA LIVE" ISO file does not start the process of creating a bootable flash drive, you can install an app that can create a bootable thumb drive as explained at https://www.tecmint.com/linux-bootable-usb-creators/

# CREATE A BOOTABLE "CLONEZILLA LIVE" USB THUMB DRIVE (continued)

- If you use the default, bundled file management app of a Linux distro to access the thumb drive, it will look like this:



3.1.2-9-amd64

# CREATE A BOOTABLE CD DISC OR A BOOTABLE DVD DISC

- If your computer has a CD or DVD player or writer, various apps that run in Linux can burn a bootable CD or DVD Disc from a "Clonezilla Live" ISO file (that you have already downloaded):
- "Brasero" is available at https://www.tecmint.com/burn-cd-dvd-linux/
- "K3b" is described at https://apps.kde.org/k3b/
