SUMMARY

Here are the actual steps for using the free "Clonezilla Live" to clone or image backup an existing hard drive or solid state drive (SSD).

USING "CLONEZILLA LIVE"

- Determine the manufacturer's serial numbers for the "source drive" and the "target drive"
- Attach the bootable "CLONEZILLA LIVE" USB thumb drive or CD or DVD to the computer (and make sure that the bootable device is operational)

USING "CLONEZILLA LIVE" continued)

- If the computer is powered up, shut it down. (Many computers will not boot up to a bootable flash drive or a bootable CD or DVD if you do a restart from an operating system that is running.)

USING "CLONEZILLA LIVE" (continued)

- If the computer is powered up, shut it down. (Many computers will not boot up to a bootable flash drive or a bootable CD or DVD if you do a restart from an operating system that is running.)

USING "CLONEZILLA LIVE" (continued)

- Power up or reboot the computer
- Press the key(s) needed to get into the firmware setup for selecting the bootable device

Please press DEL or F2 to enter UEFI BIOS

> Boot Configuration

Boot Option Priorities

Boot Option #1

Windows Boot Manager (M.2_3: ▾)

Boot Option #2

<Cancel>

USING "CLONEZILLA LIVE" (continued)

- Press the Enter key of the keyboard:

USING "CLONEZILLA LIVE" (continued)

- At this point, the top option is for making a "clone" of a drive or a drive partition and the second option is for making an "image" or restoring from a previously-made "image" of a drive or a drive partition:

Clonezilla - Opensource Clone System (OCS)

Clonezilla is free (GPL) software, and comes with ABSOLUTELY NO WARRANTY

///Hint! From now on, if multiple choices are available, you have to press space key to mark your selection. An asterisk (*) will be shown when the selection is done///

Two modes are available, you can

- (1) clone/restore a disk or partition using an image
- (2) disk to disk or partition to partition clone/restore.

Besides, Clonezilla lite server and client modes are also available. You can use them for massive deployment

Select mode:

```
device-image work with disks or partitions using images
device-device work directly from a disk or partition to a disk or partition
remote-source Enter source mode of remote device cloning
remote-dest   Enter destination mode of remote device cloning
lite-server   Enter_Clonezilla_live_lite_server
lite-client   Enter_Clonezilla_live_lite_client
```

<Ok>

<Cancel>

USING "CLONEZILLA LIVE"

(continued)

- If you wish to clone a drive or a drive partition, press the Down Arrow key of the keyboard once to select "device-device work directly.." and to turn it red.

(F.y.i. the top default option is for device-image

which would let you either create a compressed image file or use a use a previously-made compressed image file to restore to a drive or a drive partition.

```
device-image  work with disks or partitions using images
device-device work directly from a disk or partition to a disk or partition
remote-source Enter source mode of remote device cloning
remote-dest   Enter destination mode of remote device cloning
lite-server   Enter_Clonezilla_live_lite_server
lite-client   Enter_Clonezilla_live_lite_client
```

USING "CLONEZILLA LIVE" (continued)

- Press the Tab key of the keyboard to turn the "OK" to red:

Creating partition in /dev/sda...
*****.
Destination disk is too small!
Destination disk size: 16777216 sectors (8.5 GB)
Source disk size from the image: 754974720 sectors (386.5 GB)
Program terminated!!
Checking if udevd rules have to be restored...
Now syncing - flush filesystem buffers...
Ending /usr/sbin/ocs-onthefly at 2024-03-14 00:53:20 UTC...
///NOTE/// Remember to remove the source disk or the cloned destination disk before you boot this ma
chine.
Otherwise when two identical systems exist on the same machine, the restored OS will be confused, and
d the booting might fail.
*****.
If you want to use Clonezilla again:
(1) Stay in this console (console 1), enter command line prompt
(2) Run command "exit" or "logout"
*****.
When everything is done, remember to use 'poweroff', 'reboot' or follow the menu to do a normal power
roff/reboot procedure. Otherwise if the boot media you are using is a writable device (such as USB f
lash drive), and it's mounted, poweroff/reboot in abnormal procedure might make it FAIL to boot next
time!
*****.
Press "Enter" to continue...
```

USING "CLONEZILLA LIVE" (continued)

- Select the desired option.
Then press the Enter key on the
keyboard:

Choose mode

Now you can choose to:

poweroff Poweroff

reboot Reboot

cmd Enter command line prompt

rerun1 Start over (image repository /home/partimag, if mounted, will be umounted)

<Ok>
