

## **Kwilt Shoebox**

November 12, 2018

By George Harding

Treasurer, Tucson Computer Society

The Shoebox is a small unit about 1" X 2.5" X 0.5" that is a "personal cloud" device for storing all your photos in one place with access to them from anywhere.

The Shoebox comes with a USB extension cable, a power supply cord, and a HDMI connector.

Wi-Fi to connect to your home network so you have access to your memories at home and on the go.

USB port to connect USB sticks and drives of any size for unlimited storage capacity.

HDMI port to play your memories on any TV.

Power port to connect to an electrical outlet.

Setup involves charging the Shoebox, downloading the Kwilt app to your mobile device, and connecting to your WiFi network.

In order to collect your photos, you need a separate external hard drive or a large capacity flash drive. This is then connected to the Shoebox.

Upon opening the Kwilt app, you are given directions for connecting to your WiFi network, after which you can begin the download.

The download can be just from your mobile device or also from the Cloud. It may take some time to download if you have many photos/videos.

Once the download is complete, you can access the results in your mobile device where ever you are. You can print and share as you wish.

There are a few other features. One is the ability to use HDMI to view your downloads on a TV screen.

Another is the ability to download, save, and access any file, not just pictures and videos.

Storage size is virtually unlimited, using whatever size external drive or flash drive you need.

The price of the standard Shoebox is a very reasonable \$59, with no continuing costs for photo/video storage. There is a companion product, Shoebox Plus, which has more ports and faster processors.
