Here's a product you'll love! It's a blender, but a lot different from what you are used to.

First of all, it's portable and it is small and light enough to carry wherever you go.

It's powerful, turning carrots into juice, and crushing ice easily.

It has a surprisingly large capacity at 16 oz. of liquid and has ounce and milliliter markings.

It has an internal battery which is charged with an included USB-C cable and it can handle up to 15 blendings in the charge.

The power button is animated to let you know that charging or blending is under way. The power can be increased by double-tapping the power button to pulverize veggies, fruits, nuts

You can quick make tasty guacamole, pesto, salsa, and hummus. What more could you want?

You can lock the device, so that inadvertent operation doesn't occur while you are traveling.

The cap and body come in a rainbow hue of colors from which to choose.

The array of uses is amazing: smoothies, protein shakes, mixed drinks, frozen lattes, milkshakes, slushies, baby food, dips, dressings, sauces and more! It's even been used in space!

One additional benefit is that it's easy to clean. Add a drop of soap and some water, blend and you're done!

The web site has recipes for a variety of uses. You can subscribe to receive regular emails that describe new ways to use this productive device.
