January 16, 2021

Lumenology is a bright light that can be attached almost anywhere. It comes with the device, a portable tripod, a magnetic disk and screw and anchor.

What's handy about this product is that it can be placed just about anywhere. It can stand alone on its tripod, attached to a rod, pipe, rope or other similar object, or attached to a wall with the magnetic disk.

The light is about 4 inches in diameter, mounted in a rotatable foundation and has a motion-detecting unit. The motion sensor can be turned Off, On (which leaves the light on continuously) or Auto (which turns the light on when activity is sensed in a dark setting).

The tripod attaches to the base of the mount. The tripod legs can be moved into any desired configuration – standing, tipped, or wrapped around a rod or pipe.

The light is powered by three AA batteries. The light is quite bright at 1,000 lumens.

There is a one-year limited warranty.

Lumenology by Limitless Innovations Price \$40
