Baby cribs have been around for centuries without much in the way of substantial improvement.

Cradlewise has analyzed the needs of parents and has devised the crib to satisfy the needs of the most demanding parent.

Here's an interesting feature: the crib uses AI (artificial intelligence) to learn the baby's sleep patterns, can spot the first signs of wakeup, and starts bouncing along with music to soothe the baby back to sleep. The bouncing is quite similar to the motion that Mom uses to calm.

It has a built-in baby monitor that identifies waking symptoms and adapts to these as they change during the baby's first 24 months.

The monitor provides you a picture of the baby anytime you want. And you can watch from anywhere! It also provides real-time audio of the baby.

The monitor also has night vision so you can check on the baby without having to turn on lights that might disturb.

One more monitor benefit is the ability to monitor the baby's sleep pattern with your smart phone. It shows the nightly tosses and turns.

This is an all-in-one solution for newborn to toddler. The platform that contains the mattress can be lowered as needed, as the baby grows.

The cost of this product may deter some parents, but there is a 30 night free trial and payment plans can be arranged.
