April 28, 2022

The **C6** is a home camera that keeps track of what's going on at home while you're away.

You may be wondering what the cat has gotten into now, or whether the dog is tearing up the sofa. Or you may want to be sure that the pet sitter made it there on time to feed and water your darlings. Or you might wish to be alerted that the baby woke up.

The **C6** not only shows you what's happening now but it can alert you to events that you are interested in knowing about.

The unit can pan and tilt to give you a complete view of the area and gives you a stunning 2K picture

Because the embedded AI empowers the camera to lock on and track a moving object upon detection, it provides the opportunity to cherish a moment that otherwise would be missed. The **C6** can also track high-speed activity and fast movements will not appear blurry in the camera's vision, thanks to the 25 fps video recording capacity.

Amazingly, any loud noises such as a dog barking, a baby crying or a vase smashing will be detected, as the **C6** picks up sudden sharp noises and sends real-time notifications over the mobile app. Children can also be reassured that, if home alone, the C6 provides a new way and easy way to call parents. When the camera detects a waving hand, a video call will be sent to the parent's mobile phone.

The camera also can record events for later viewing.

Installing the camera involves attaching it to your Wi-Fi system through your router. It operates on the 2.4 GHz Wi-Fi band. My home system operates mainly on the 5 GHz band, so I had difficulty installing it. The "eyelid" cover moves up or down to make available a button that is used to connect to your system.

The top part of the camera rotates and can move up and down to a limited extent. This gives you extended range of visibility when you look at the image on your cell phone app.

This is a modern device that satisfies your need to keep track of home while you are away.
