This new product is quite exciting!

Basically, it is a projector that can be pointed in any direction, can create a focused image at any distance on any surface and comes in various designs.

The unit swivels so you can point it in any direction you want, wall, table, ceiling and more.

It weighs less than 2 pounds and can swivel up to 180 degrees.

The device can focus anywhere from 30 to 100 feet with up to 550 lumens of brightness and with a 1080p resolution.

It can play music and includes 360 degree sound.

You can project Netflix movies on the wall, on your desktop or, for nighttime viewing, on the ceiling.

Available accessories include a lens cap for creating a mood, a base that allows you to screw the unit into a lightbulb socket, a waterproof case for outdoor use, and a USB-C portable battery for outlet-free viewing.
