Always wanted to fly in your own vehicle? Here's your chance!

This product is a vertical takeoff and landing vehicle. It has six motors that are sufficiently strong enough to lift you off the ground and propel you where you want to go.

The RECON is an all-electric aerial ATV designed to make flight accessible for all regardless of skill level or pilot's certification.

It has a low learning curve for the pilot, which is a significant advantage.

The company states, "Powered by six electric motors, the carbon-blade propellers spin at 2,000 rpm and when flying it's not very loud. It is also easy to fly, noting that with as little as 45 minutes of training a user can be in the air."
