Here is a storage solution for your videos, pictures, notes, files and more. It is a cloud device that is yours and is accessible anywhere in the world.

You now can rely on the privacy of your cloud storage with no concern about access by others or continuity or existence of the cloud.

amber **X**

The device is not large, being 4.75” square by 1.25” thick and is fairly light.

The device can store up to 500 GB of data and offers several means of transferring your data. The easiest is by WiFi, but there is USB type A port, and an ethernet port and a reader for SD cards. In addition, there is an HDMI output port.

In the unlikely event the 500GB isn't enough, you can plug in an external hard drive.

There are no fees and security is assured for your data. The device comes with a power cord and plug. Once powered, your photos are automatically loaded. If you unplug the power cord or power is lost, your data is securely saved.

There is a companion app which you use to view and control the device. This allows you to view your data, to back it up and see how much space has been used.

There is a feature called "Smart AI" which can sort out all items of a type, such as People, Animal, Outdoor and more.

Setup for the device is a bit complicated, but the app has a handy list and instructions to help you with this process.

This is a safe, extensive, and free way to save your photos and other data wherever you are and share with whomever you wish.
